RCA-8122

BEAM POWER TUBE

RCA-8122 is a very small, low-cost, forced-air-cooled beam power tube designed for use as an rf power amplifier, oscillator, regulator, distributed amplifier, or linear rf power amplifier in mobile or fixed equipment.

The 8122 features a light-weight, cantilever-supported cylindrical electrode structure within a ceramic-metal envelope. This construction provides a very sturdy tube and permits high-temperature operation.

The terminal arrangement of the 8122 facilitates use of the tube with tank circuits of the coaxial or strip-line type. Effective isolation of the output circuit from the input circuit is provided at the higher frequencies by the low-inductance ring terminal for grid-No.2. A base-pin termination for grid-No.2 is also available for operation of the 8122 at the lower frequencies.

The tripod arrangement of both the cathode and the grid-No.1 leads not only simplifies construction, but enhances electrical characteristics. The three cathode leads reduce the inductance path to rf ground and reduce the input admittance at high frequencies.

The three grid-No.1 leads to separate pins accommodate a split-input circuit for distributed amplifier service.

GENERAL DATA

Electrical:

Heater, for Unipotential; Cathode:

Voltage (AC or DC) ^a	13.5 ± 10%	volts
Current at 13.5 volts	1.3	A
Minimum heating time	60	s

Mu-Factor, Grid No.2 to Grid No.1

for plate volts = 450, Grid-No.2
volts = 325, and plate amperes = 1.2 12

Direct Interelectrode Capacitances:^b

Grid No.1 to plate	0.13 max.	pF
Grid No.1 to cathode	16	pF
Plate to cathode	0.011	pF
Grid No.1 to grid No.2	24	pF
Grid No.2 to plate	7.0	pF
Grid No.2 to cathode	2.6	pF
Cathode to heater	3.4	pF

Mechanical:

Operating Position	Any
Maximum Overall Length	2.26"
Seated Length	1.920" ± 0.065"
Greatest Diameter	1.625" ± 0.015"
Base	Large-Wafer Elevenar 11-Pin with Ring (JEDEC No.E11-81)
Socket	Erie [▲] No. 9802-000 and 9804-000, Johnson [■] No. 124-311-110, Mycalex* No. CP464-2, or equivalent
Grid No.2 Bypass Capacitor	Erie [▲] No. 2943-002, Johnson [■] No. 124-121, or equivalent
Weight (Approx.)	3.5 oz

[▲] Erie Technological Products, Inc., 645 West 12th Street, Erie, Pa.

[■] E. F. Johnson Co., 1921 10th Ave., S. W., Waseca, Minn.

LINEAR RF POWER AMPLIFIER **Single-Sideband Suppressed-Carrier Service^c**

*Peak envelope conditions for a signal having
a minimum peak-to-average power ratio of 2*

Typical CCS Operation at 30 MHz with "Two-Tone Modulation":

Maximum CCS Ratings, Absolute-Maximum Values:

DC PLATE VOLTAGE:			
Up to 30 MHz	3000 ^d max.	volts	
Up to 500 MHz	2200 max.	volts	
<i>Up to 500 MHz</i>			
DC GRID-No.2 VOLTAGE	400 max.	volts	
DC GRID-No.1 VOLTAGE	-100 max.	volts	
DC PLATE CURRENT AT PEAK OF ENVELOPE			
	450 ^e max.	mA	
DC GRID-No.1 CURRENT	100 max.	mA	
PLATE DISSIPATION	400 max.	watts	
GRID-No.2 DISSIPATION	8 max.	watts	
PEAK HEATER-CATHODE VOLTAGE:			
Heater negative with respect to cathode	150 max.	volts	
Heater positive with respect to cathode	150 max.	volts	
Maximum Circuit Values:			
Grid-No.1 Circuit Resistance Under Any Condition:^l			
With fixed bias	25000 max.	ohms	
With fixed bias (In Class AB ₁ operation)	100000 max.	ohms	
With cathode bias	Not recommended		
Grid-No.2 Circuit Impedance ^h	10000 max.	ohms	
Plate Circuit Impedance ^d	See Note ^f		

	AB ₁	AB ₂	
DC Plate Voltage	2000	2500	volts
DC Grid-No.2 Voltage	400	400	volts
DC Grid-No.1 Voltage	-35	-35	volts
Zero-Signal DC Plate Current	100	115	mA
Effective RF Load Resistance	3050	3500	ohms
DC Plate Current at Peak of Envelope	335	400	mA
Average DC Plate Current	250	275	mA
DC Grid-No.2 Current at Peak of Envelope	10	6	mA
Average DC Grid-No.2 Current	7	4	mA
DC Grid-No.1 Current at Peak of Envelope	0.05 ^g	3	mA
Peak-Envelope Driver Power Output (Approx.)	0.3	0.5	watt
Output-Circuit Efficiency (Approx.)	90	90	%
Distortion Products Level:			
Third order	29 ^k	28	dB
Fifth order	32	32	dB
Useful Power Output (Approx.):			
Average	190	285	watts
Peak envelope	380	570	watts

RF POWER AMPLIFIER & OSCILLATOR – Class C Telephony^c **and**

RF POWER AMPLIFIER – Class C FM Telephony^c

Maximum CCS Ratings, Absolute-Maximum Values:

<i>Up to 500 MHz</i>			
DC PLATE VOLTAGE	2200 max.	volts	
DC GRID-No.2 VOLTAGE	400 max.	volts	
DC GRID-No.1 VOLTAGE	-100 max.	volts	
DC PLATE CURRENT	300 max.	mA	
DC GRID-No.1 CURRENT	100 max.	mA	
GRID-No.2 DISSIPATION	8 max.	watts	
PLATE DISSIPATION	400 max.	watts	
PEAK HEATER-CATHODE VOLTAGE:			
Heater negative with respect to cathode	150 max.	volts	
Heater positive with respect to cathode	150 max.	volts	

Maximum Circuit Values:

Grid-No.1 Circuit Resistance Under Any Condition:			
With fixed bias	25000 max.	ohms	
Grid-No.2 Circuit Impedance	10000 max.	ohms	
Plate Circuit Impedance	See Note ^f		

Typical CCS Operation:

In Grid-Drive Circuit at 50 MHz

	700	1000	1500	2000	
DC Plate Voltage	700	1000	1500	2000	volts
DC Grid-No.2 Voltage	175	200	200	200	volts
DC Grid-No.1 Voltage	-10	-30	-30	-30	volts
DC Plate Current	300	300	300	300	mA
DC Grid-No.2 Current	25	20	20	20	mA
DC Grid-No.1 Current	50	40	40	30	mA
Driver Power Output (Approx.)	1.2	2	2	2	watts
Useful Power Output	120	175	275	375	watts

In Grid-Drive Circuit at 470 MHz

	700	1000	1500	2000	
DC Plate Voltage	700	1000	1500	2000	volts
DC Grid-No.2 Voltage	200	200	200	200	volts
DC Grid-No.1 Voltage	-30	-30	-30	-30	volts
DC Plate Current	300	300	300	300	mA
DC Grid-No.2 Current	10	10	5	5	mA
DC Grid-No.1 Current	30	30	30	30	mA
Driver Power Output (Approx.)	5	5	5	5	watts
Useful Power Output	100	165	235	300	watts

PLATE-MODULATED RF POWER AMPLIFIER – Class C Telephony

Carrier conditions per tube for use with a max. modulation factor of 1.0

Maximum CCS Ratings, Absolute-Maximum Values up to 500 MHz:

DC PLATE VOLTAGE	1800 max.	volts	
DC GRID-No.2 VOLTAGE	400 max.	volts	
DC GRID-No.1 VOLTAGE	-100 max.	volts	

DC PLATE CURRENT	250 max.	mA	
DC GRID-No.1 CURRENT	100 max.	mA	
GRID-No.2 INPUT	5 max.	watts	
PLATE DISSIPATION	280 max.	watts	

CHARACTERISTICS RANGE VALUES

	Note	Min.	Max.	
1. Heater Current	1	1.15	1.45	A
2. Direct Interelectrode Capacitances:				
Grid No.1 to plate . . .	2	—	0.13	pF
Grid No.1 to cathode . .	2	14.3	17.7	pF
Plate to cathode	2	0.0065	0.0155	pF
Grid No.1 to grid No.2 .	2	20.8	25.2	pF
Grid No.2 to plate . . .	2	6.3	7.7	pF
Grid No.2 to cathode . .	2	2.0	3.0	pF
Cathode to heater	2	2.5	4.1	pF
3. Grid-No.1 Voltage	1,3	—8	—19	volts
4. Reverse Grid-No.1 Current	1,3	—	—25	μA
5. Grid-No.2 Current	1,3	—5	+6	mA
6. Peak Emission	1,4	13	—	peak A
7. Interelectrode Leakage Resistance	5	50	—	megohm
8. Zero Bias Plate Current .	1,6	1.0	1.8	A

Note 1: With 13.5 volts ac or dc on heater.

Note 2: Measured with special shield adapter.

Note 3: With dc plate voltage at 700 volts, dc grid-No.2 voltage of 250 volts, and dc grid-No.1 voltage adjusted to give a dc plate current of 185 mA.

Note 4: For conditions with grid No.1, grid No.2, and plate tied together; and pulse voltage source connected between plate and cathode. Pulse duration is 2.5 microseconds and pulse repetition frequency is 60 pps. The voltage-pulse amplitude is 200 volts peak. After 1 minute at this value, the current-pulse amplitude will not be less than the value specified.

Note 5: Under conditions with tube at 20° to 30° C for at least 30 minutes without any voltages applied to the tube. The minimum resistance between any two electrodes as measured with a 200-volt Megger-type ohmmeter having an internal impedance of 1.0 megohm, will be no less than the value specified.

Note 6: With dc plate voltage of 450 volts, dc grid No.2 voltage of 400 volts, dc grid No.1 voltage of —100 volts, grid drive voltage to zero. With pulse duration of 4500 to 5000 μs and pulse repetition frequency is 10 to 12 pps.

FOOTNOTES

^aBecause the cathode is subjected to back bombardment as the frequency is increased with resultant increase in temperature, the heater voltage should, for optimum life, be reduced to a value such that at the heater voltage obtained at minimum supply voltage conditions (all other voltages constant) the tube performance just starts to show some degradation; e.g., at 470 MHz heater volts = 12.5 (approx.).

^bMeasured with special shield adapter.

^cSee Section V.C. of 1CE-300.

^dFor operation above 2200 plate volts, the tube shall see an effective plate-supply impedance of no less than 750 ohms. A fault current limiting resistor of no less than 15 ohms is to be used between the output filter capacitance and the tube plate. The plate-supply-output-filter capacitance is to be no greater than 10 μF.

^eThe maximum rating for a signal having a minimum peak-to-average power ratio less than 2, such as is obtained in "Single-Tone" operation, is 300 mA. During short periods of circuit adjustment under "Single-Tone" conditions, the average plate current may be as high as 450 mA.

^fThe tube should see an effective plate supply impedance which limits the peak current through the tube under surge conditions to 15 amperes.

^gThis value represents the approximate grid-No.1 current obtained due to initial electron velocities and contact-potential effects when grid No.1 is driven to zero volts at maximum signal.

^hA fault current limiting resistor of no less than 320 ohms is to be used between the screen output filter capacitance and the tube screen. The screen supply output filter capacitance is to be no greater than 80 μF.

ⁱA fault current limiting resistor of no less than 20 ohms is to be used between the bias supply output filter capacitance and the tube grid-No.1. The bias supply output filter capacitance is to be no greater than 150 μF.

^kThe value of third order distortion product level shown may be improved by approximately 5 dB by utilizing an unby-passed, non-inductive 20-ohm resistor between the cathode and ground; a slight increase in drive power will be required.

DIMENSIONAL OUTLINE

92CS-11304RI

NOTE 1: Keep all stippled regions clear. Do not allow contacts or circuit components to protrude into these annular volumes.

NOTE 2: The diameters of the radiator, grid-No.2 terminal contact surface, and pin circle to be concentric within the following values of maximum full indicator reading:

Radiator to Grid-No.2
 Terminal Contact Surface 0.030 " max.
 Radiator to Pin Circle 0.040 " max.
 Grid-No.2 Terminal Contact
 Surface to Pin Circle 0.030 " max.

NOTE 3: The full indicator reading is the maximum deviation in radial position of a surface when the tube is completely rotated about the center of the reference surface. It is a measure of the total effect of run-out and ellipticity.
